Faraz Taslimi.

FRONTEND DEVELOPER — HTML · CSS · JAVASCRIPT

Faraz.Taslimi@gmail.com
Karaj, Iran — open to remote
faraztaslimi.github.io
github.com/FarazTaslimi

SKILLS

HTML & JAVASCRIPT

Semantic HTML · Vanilla JS · DOM · ES Modules · Canvas animation · Data-driven UI · Custom elements · Interactive UI

CSS & SCSS

Flexbox · CSS Grid · Responsive · Animations · SCSS 7-1 · Mixins · BEM · SVG Shapes

TOOLS

Vite · Node & npm · Git & GitHub · VS Code · Chrome DevTools · Figma · Illustrator · Photoshop

COURSES

- Jonas Schmedtmann — Advanced CSS & Sass
- Colt Steele — HTML & CSS
- Kevin Powell — HTML & CSS
- Codeyad — HTML & CSS
- W3Schools — HTML & JavaScript
- Rocket — HTML

LANGUAGES

Persian — Native

English — B2 Upper-Intermediate

PROFILE

Frontend developer building **complete, visually polished websites** and interfaces. Strong in **Vanilla JavaScript**, Vite and structured **SCSS architecture** (7-1 + BEM). Figma-first: designs the page, then rebuilds it **pixel-true by hand** in code. Vanilla-first rule — if a line can't be explained, it doesn't ship. Debugs with DevTools; uses AI tools thoughtfully.

SELECTED PROJECTS

Natorous — Expedition Travel Landing Page

LIVE · 2026

Independent frontend project — designed, built and deployed end-to-end
natorous.netlify.app github.com/FarazTaslimi/Natorous

- **Fully-responsive, dark-editorial landing page** built with Vite + Sass (7-1 architecture) and BEM — zero runtime dependencies.
- **Framework-free component system:** every section is a pure ES-module; the page renders from one editable JSON config — content fully separated from code.
- **Ready to use:** a company can rebrand by editing one data file (site.config.json) and redeploying — shipped with Netlify hosting and a GitHub auto-deploy pipeline.
- **Performance & accessibility:** ~6 kB gzipped JS/CSS, self-hosted fonts, scroll-spy, reduced-motion-safe reveals, skip-link & ARIA states.

Now Music — Telegram-Powered Player

IN DEVELOPMENT

Personal product — design locked, audio engine under construction, built in the open
Player prototype: codepen.io/faraztaslimi

The key idea: **the whole music source is Telegram** — playlists and audio live in Telegram chats; the player streams them right in the browser. Your Telegram library becomes the backend, with queue, lyrics and now-playing UI on top.

PORTFOLIO SITE — LIVE

faraztaslimi.github.io — hand-coded portfolio; its rain, clouds and lightning are a **pure JavaScript canvas system**. No libraries.

CODEPEN BUILDS — 04

Data-driven tour cards · **FT Elements custom tags** (Web Components) · Now Playing player · pure-CSS brand badge.

DEVELOPMENT EXPERIENCE

- **1.5 years** of self-directed frontend learning and practice, including **8 months** of focused, hands-on project building.
- Hands-on practice: **hamburger menus, tabs, modals, popups** and interactive cards.
- Frequent use of **Chrome DevTools** for debugging and troubleshooting frontend issues.
- AI-assisted workflows for **visual asset creation** and design exploration.

EDUCATION

Vocational High School — Computer Networking & Software

EXPECTED 2027

Currently enrolled · Technical diploma track
